GBD Dataframe Data Dictionary: Week 6 Tutorial

The data is from the Global Burden of Disease Collaborative Network.

Global Burden of Disease Study 2019 (GBD 2019) Results. Seattle, United States: Institute for Health Metrics and Evaluation (IHME), 2020. Available from https://vizhub.healthdata.org/gbd-results/.

`gbd_df` data dictionary

Column Name	Description	Data type
location	categorization of country location by SDI *, 5 levels	factor
sex	sex of individual, 2 levels	factor
age	age group ranging from 0-9 years old to 85+ years, 6 levels	factor
cause	cause of death **, 3 levels	factor
year	year ranging from 1990 to 2019	numeric
deaths_rate_100k	deaths per 100,000 population	numeric
prevalence_rate_100k	total cases per 100,000 population	numeric
incidence_rate_100k	new cases per 100,000 population	numeric
decade	decade categories of year: 1990s, 2000s, 2010s	factor
cause_plot	cause variable with levels renamed for plotting	factor
location_plot	location variable with ordered levels	factor

*Developed by GBD researchers and used to help produce these estimates, the Socio-demographic Index (SDI) is a summary measure of a geography's socio-demographic development. It is based on average income per person, educational attainment, and total fertility rate (TFR).

**Cause of death in 3 general categories: Communicable, maternal, neonatal, and nutritional diseases, Non-communicable diseases, and Injuries
